

Jeanre Swanepoel

Cloud Solutions Architect

CORE SKILLS

- Microservices Architecture
- Distributed Systems
- Serverless Architectures
- Container Orchestration
- Cloud-Native Design
- RESTful APIs
- GraphQL APIs
- Event-Driven Architecture
- Microfrontend Architecture
- Polyglot Development
- Docker
- Kubernetes
- CI/CD Automation
- SQL
- NoSQL
- Caching Strategies
- Message Queuing Systems
- Multi-Cloud (AWS, Azure, GCP)
- Terraform
- CloudFormation

CERTIFICATIONS

- SOC2
- ISO27001

EDUCATION

- Bachelor of Science in Computer Science, University of Cape Town

PROFESSIONAL SUMMARY

Accomplished Cloud Solutions Architect and Distributed Systems Engineer with extensive experience in designing and implementing scalable, resilient, and secure cloud-native solutions. Expertise in microservices architecture, container orchestration, and multi-cloud strategies, with a strong focus on performance optimisation, compliance, and engineering excellence. Proven track record of leading digital transformation initiatives, modernising legacy systems, and mentoring engineering teams to deliver high-quality solutions across various industries including FinTech, healthcare, and e-commerce.

PROFESSIONAL EXPERIENCE

Cloud Solutions Architect

Freelance Consulting

2020 - Present

- Designed and implemented scalable cloud-native architectures across AWS, Azure, and GCP, ensuring cost optimisation and vendor lock-in mitigation.
- Led digital transformation initiatives, modernising legacy systems and migrating them to cloud platforms with minimal downtime.
- Developed robust microservices architectures with clear service boundaries and efficient communication patterns.
- Implemented comprehensive CI/CD pipelines to streamline software delivery and improve deployment frequency.
- Advised clients on technical strategy, aligning technology investments with business objectives and long-term vision.

Senior Backend Engineer

Tech Solutions Ltd.

2017 - 2020

- Engineered high-performance backend systems using polyglot programming approaches to meet diverse business requirements.
- Designed and deployed RESTful and GraphQL APIs with a focus on scalability, security, and maintainability.
- Optimised database performance by implementing advanced SQL, NoSQL, and caching strategies.
- Collaborated with cross-functional teams to implement event-driven architectures using message queuing systems.
- Mentored junior engineers, fostering a culture of engineering excellence and continuous learning.

DevOps Engineer

Cloud Innovators Inc.

2014 - 2017

- Implemented container orchestration solutions using Docker and Kubernetes for production workloads.
- Automated infrastructure provisioning and management using Terraform and

CloudFormation.

- Built comprehensive observability solutions, including monitoring, logging, and tracing, to ensure system reliability.
- Established DevSecOps pipelines to integrate security best practices into the software development lifecycle.
- Conducted performance engineering initiatives, including capacity planning and scalability strategies.

KEY ACHIEVEMENTS

- Successfully led the migration of a legacy monolithic application to a microservices-based architecture, reducing system downtime by 40%.
- Architected a multi-cloud solution for a financial services client, achieving a 30% reduction in operational costs.
- Designed and implemented a serverless architecture for a healthcare provider, enabling rapid scalability and improving system reliability.
- Developed a comprehensive CI/CD pipeline that reduced deployment times by 50% and improved overall software quality.
- Implemented SOC2 and ISO27001 compliance frameworks for multiple organisations, enhancing security and regulatory adherence.
