PROFESSIONAL SUMMARY

Jonathan Wagener is a highly experienced full-stack software developer with nearly two decades of expertise in backend, frontend, and DevOps. He specialises in building robust, scalable, and secure applications, ensuring high-quality solutions for enterprise software development, cloud infrastructure, CI/CD, API design, and system architecture. Jonathan has a proven track record in delivering complex projects across various industries, including healthcare, education, and government.

PROFESSIONAL EXPERIENCE

Senior Developer and UI/UX Designer

Metropolitan Health

2018 - Ongoing

- Designed and developed a member and provider management application using Angular, Ionic, and NodeJS.
- Upgraded the application to Angular 19 and removed Ionic components.
- Developed a Python application to connect to and print cards using Evolis Primacy card printers.
- Implemented a seamless hardware integration solution using Python and Angular.

Development Manager & Lead Developer

SYW

2015 - 2018

- Managed team coordination, project planning, and infrastructure.
- Oversaw technical development of various web and mobile applications.
- Developed a mobile app for medical aid scheme field workers using Ionic Framework and Angular.
- Integrated Asterisk AML with Symfony web applications for call management solutions.

Drupal Developer

Western Cape Government

2013 - 2015

- Led the migration of Drupal 8 applications to Drupal 9.
- Developed custom Drupal 8 migrations for importing products into Commerce 2 shops.
- Implemented technical solutions for legal applications based on Drupal.
- Developed an iVeri payment gateway module for Drupal Commerce 2 online shops.

Cofounder & Lead Developer

Amoebasys

2007 - 2013

- Led development projects for major clients, including Design Indaba and Media24.
- Managed hosting division and Linux infrastructure.
- Developed a Drupal-based platform for Australian media intelligence companies.
- Created custom CMS solutions for efficient website management.

Freelance Software Developer

Various Clients

2022 - Ongoing

- Developed a simplified medical aid membership application using Angular and Node.
- Built Flutter apps for educational startups with event scheduling and instant messaging features.
- Created an AI assistant for school teachers using OpenAI API and React.
- Developed a news aggregation application pulling articles from 170+ sources using RSS feeds.

KEY ACHIEVEMENTS

- Developed a Python-based text adventure game 'Marooned on Mars!' in the style of Zork.
- Created 'Dagboek,' a class scheduler for teachers, trainers, and coaches.
- Designed and implemented 'Cindy Katy,' an RSS news feed aggregator pulling from 170+ sources.
- Authored 'Better Login,' a Drupal module with over 31,000 downloads and 6,000+ site installs.
- Successfully migrated complex Drupal applications and upgraded legacy systems.
