

Keagile Nduli

Test Automation Engineer

CORE SKILLS

- Python
- Java
- JavaScript
- C#
- SQL
- SQLite3
- H2
- HTML
- CSS
- Spring Boot
- .NET
- React
- NUnit
- JUnit
- Automated API Testing
- GUI Testing
- Test Automation
- Test Planning
- Docker
- CI/CD Pipelines

EDUCATION

- Diploma in Software Engineering (NQF 6), WeThinkCode, Johannesburg, Gauteng, Sep 2024 - Dec 2025

PROFESSIONAL SUMMARY

Software Engineering graduate with hands-on experience in Python, Java, JavaScript, and web development, including building RESTful APIs and database-backed systems. Proficient in automated API testing, GUI testing, and test automation, with a strong foundation in object-oriented design, problem-solving, and clean code practices. Experienced in agile methodologies, version control, code reviews, and CI/CD pipelines. Passionate about delivering reliable, well-tested software and growing as a versatile developer.

PROFESSIONAL EXPERIENCE

Test Automation Engineer

Quality Assurance Testing Project

Oct 2025 - Dec 2025

- Designed and executed automated API tests to validate endpoints, data integrity, and error handling.
- Performed GUI testing for a web application, ensuring user flows and functional requirements were met.
- Collaborated with a team to test a full-stack web application, identifying defects and verifying fixes.

Backend Java Developer

StreetSafe

Sep 2025 - Present

- Developed a Spring Boot REST API for crime report lifecycle management.
- Implemented database persistence with SQLite/H2 and exposed endpoints for administrative dashboards.
- Designed an anonymous reporting system with persistent database storage.

Software Developer in Test (SDET)

WeThinkCode

Sep 2024 - Dec 2025

- Built a Greenfield Robot World simulation in Java, designing system architecture and implementing core features.
- Extended a Brownfield codebase by integrating Docker, SQLite3, and CI/CD pipelines.
- Collaborated in agile teams using Git workflows, code reviews, and incremental feature delivery.
- Completed multiple Python and Java projects focused on problem-solving, clean code, and object-oriented design.

Full Stack Developer (.NET/React)

Intelligent Voice Assistant

Mar 2025 - Present

- Developed an intelligent voice-controlled assistant using Python, speech recognition, and text-to-speech technologies.
- Implemented intent-based command handling with a neural network model.
- Enabled voice-driven note creation and to-do list management.

KEY ACHIEVEMENTS

- Successfully designed and implemented a Greenfield Robot World simulation in Java.
- Developed a Spring Boot REST API for crime report lifecycle management with database persistence.
- Executed automated API and GUI testing for backend and frontend applications, ensuring software reliability.
- Built an intelligent voice assistant using Python and NLP technologies, enabling voice-driven task management.
