

Mpho Moraba

Systems Development Specialist

CORE SKILLS

- Java
- Spring Boot
- Microservices
- REST APIs
- PHP
- Laravel
- JavaScript
- React
- Angular
- Flutter
- Payment Gateway Integrations
- Banking APIs
- Financial APIs
- CI/CD
- Linux
- Git
- Agile
- Scrum
- VOIP Systems
- Telecommunications Platforms

CERTIFICATIONS

- PMP - Project Management Professional
- Cyber Security Certificate

EDUCATION

- BSc (Hons) Computer Science - 2nd Class Upper, University of Zimbabwe, 2016 - 2020

PROFESSIONAL SUMMARY

Results-driven Senior Software Developer with over 6 years of experience in architecting and delivering scalable enterprise systems across financial services and telecommunications. Recognised for engineering high-performance fintech platforms, including stock exchange trading systems and payment gateway integrations, that process mission-critical transactions at scale. Adept at leading cross-functional teams, conducting technical architecture reviews, and mentoring developers to build engineering cultures that prioritise quality and speed. Proficient in Java (Spring Boot), React, Laravel, and modern microservices patterns, with a proven ability to translate complex business requirements into robust, maintainable software solutions.

PROFESSIONAL EXPERIENCE

Systems Development Specialist

Econet Wireless Zimbabwe

October 2023 - Present

- Spearheaded architecture and development of enterprise-grade applications, delivering measurable improvements in system performance and end-user experience across production platforms serving millions of users.
- Championed Agile/Scrum adoption across development squads, reducing development cycle times by 20% and increasing delivery predictability for major product releases.
- Established CI/CD pipelines and automated deployment workflows, cutting release lead times and significantly reducing manual deployment errors.
- Led code review culture and hands-on mentorship for junior engineers, raising team code quality standards and accelerating onboarding for new developers.
- Produced comprehensive system and API documentation enabling smooth cross-team integrations and reducing onboarding friction for third-party partners.
- Conducted R&D into emerging enterprise technologies, identifying opportunities to improve platform ROI and inform the technical roadmap.

Laravel Developer

Staxo Group

December 2022 - October 2023

- Maintained and extended Laravel-based CRM and financial management systems, delivering feature enhancements and bug fixes within strict SLA windows.
- Engineered payment gateway integrations for fintech platforms including Bankzy, improving transaction processing reliability and reducing failed payment rates.
- Delivered technical support across live online applications - including gaming platforms - ensuring high availability and rapid incident resolution.
- Collaborated asynchronously with UK-based product and engineering teams, demonstrating strong communication and delivery in a fully remote international environment.

Software Developer

Zimbabwe Stock Exchange (ZSE)

August 2020 - December 2022

- Architected and launched ZSE Direct, a fully digital stock trading platform that democratised access to Zimbabwe's capital markets for retail and institutional investors.
- Led end-to-end development of the Victoria Falls Stock Exchange (VFEX) digital trading platform, expanding ZSE's digital infrastructure to Zimbabwe's USD-denominated bourse.
- Built a suite of integration APIs enabling interoperability between ZSE systems and external financial institutions, brokers, and regulatory bodies.
- Developed a centralised historical market data repository, enabling analytics, compliance reporting, and data-driven decision making across the exchange.
- Implemented an automated transaction monitoring and compliance system, enhancing regulatory adherence and real-time fraud detection capabilities.
- Participated in system architecture discussions for high-availability trading platforms and authored detailed architectural design documents aligned to organisational standards.

Software Developer Intern

Rubiem Solutions

August 2018 - August 2020

- Built and maintained full-stack web applications using Laravel, delivering RESTful APIs and responsive UIs integrated with third-party services.
- Developed cross-platform mobile applications using Flutter, including complete UI design, backend API integration, and JWT/Firebase authentication systems.
- Designed relational database schemas and wrote optimised SQL queries, ensuring high-performance data retrieval for production applications.
- Collaborated in Agile team environments using Git version control, participated in code reviews, and deployed applications to production environments.

KEY ACHIEVEMENTS

- Received the ZSE Direct Excellence Award for outstanding contribution to Zimbabwe Stock Exchange's digital transformation flagship project.
- Secured 2nd Place in the Vice-Chancellor's Mobile App Awards, recognising top developers in a competitive national mobile app development challenge.
- Won the UNESCO Mobile Development Award for innovation in technology for development.
