

Peter Idah

Principal / AI Engineer

CORE SKILLS

- Python
- FastAPI
- Flask
- Django
- API orchestration
- workflow backends
- automation scripting
- LangGraph
- LangChain
- MCP
- tool-calling workflows
- prompt engineering
- prompt orchestration
- multi-model routing
- agent guardrails
- OpenAI
- ChatGPT
- Claude
- Gemini
- AWS Bedrock
- RAG pipelines
- pgvector
- retrieval and embeddings
- evaluation patterns
- drift monitoring
- Docker
- Kubernetes
- Terraform
- GitHub Actions
- GitLab CI
- Concourse
- Harness
- AWS
- GCP
- Azure
- Golang
- EKS/AKS
- Nomad
- Consul
- Vault
- Datadog
- Prometheus
- Kafka
- distributed systems

PROFESSIONAL SUMMARY

Experienced AI and platform engineer with over 20 years delivering production systems, specialising in agentic AI workflows, governed LLM systems, and robust Python-based orchestration. Demonstrates hands-on expertise in multi-model AI agent development, workflow automation, retrieval pipelines, and evaluation-aware control layers. Adept at translating prototype AI solutions into reliable, production-ready services with strong operational guardrails, observability, and deployment discipline. Brings deep engineering breadth across Kubernetes, Terraform, CI/CD, and regulated platform operations, with a proven record in both financial and government environments.

PROFESSIONAL EXPERIENCE

Principal / AI Engineer

Graventure

Dec 2025 - Present

- Designed and implemented a governed agentic control plane for autonomous insurance workflows, introducing the D0-D3 delegated-authority standard.
- Built workflow controls for delegated actions, escalation paths, and lineage-aware execution, ensuring agent-spawn-agent containment in multi-agent flows.
- Reduced unauthorized payout exposure to zero in reference runs by enforcing authority checks and runtime guardrails.
- Produced decision traces and control outputs, enhancing transparency for risk, compliance, and operational stakeholders.

Fractional CTO (AI) / Hands-On Engineer

AI Creation Labs

2025 - Present (Fractional)

- Provided technical leadership across AI strategy, architecture, and production delivery.
- Built and shipped a production MCP server and ChatGPT workflow app with secure OAuth and robust reliability controls.
- Transformed prototype AI workflows into production-ready services with enhanced guardrails, observability, and operational discipline.

AI Engineer

PixAILabs.com

Jun 2024 - Nov 2024

- Developed and launched production AI agent workflows for creative and video use cases using Python orchestration across Gemini, OpenAI, and Claude models.
- Implemented LangGraph-based orchestration patterns and LLMOps-style monitoring/tracing for reliable execution.
- Applied Claude Code, Codex, and Claude Flow for rapid agentic engineering and workflow iteration.

Senior Platform Engineer

Novata

Mar 2024 - Jun 2024

- Managed EKS-based platform delivery across multiple AWS accounts in a regulated data environment.
- Enhanced CI/CD controls, observability, and operational readiness for production workloads.

SRE / DevOps Consultant

Cedecoin (Multiple Startups)

Mar 2023 - Feb 2024

- Delivered platform engineering and automation across startup environments, integrating AI capabilities into production Python workflows.
- Maintained delivery discipline and environment stability during rapid scaling.

Senior Golang Developer / SRE

Office for National Statistics

Sept 2021 - Mar 2023

- Built identity and data microservices in a sensitive government-data environment under GDS standards.
- Delivered APIs and cloud integrations across AWS Cognito, Aurora PostgreSQL, Lambda, MongoDB, and DocumentDB.
- Worked with Terraform, Docker, Nomad, Consul, Vault, and Concourse in production delivery environments.

Senior SRE - Cloud Team

HashiCorp

Nov 2019 - Mar 2021

- First SRE in EMEA for HashiCorp Cloud Platform, working on Consul and Vault data plane across AWS and Azure.
- Improved observability, operational readiness, and service integrations across a complex distributed systems estate.

Platform Operations Lead

MUFG Investor Services

2018 - 2019

- Led AWS platform operations across five jurisdictions in a regulated financial environment.
- Uplifted team capability and delivery control for an 8-engineer global team.

Senior Engineer

Pearson

2017 - 2018

- Built Go- and Python-based production services, Kafka consumers, analytics pipelines, and Kubernetes extensions.
- Delivered StackStorm integration and spoke at London Kubernetes Meetup.

Cloud Platform Engineer

Sony PlayStation

2016 - 2017

- Delivered AWS EKS launch infrastructure supporting 400,000 concurrent players.
- Implemented robust CI/CD and deployment patterns for high-scale gaming workloads.

Platform Engineer

Red Hat Professional Services

2015 - 2016

- Built Tesco Bank's production estate and delivered enterprise platform solutions for Allianz Insurance.
- Applied RHCE expertise to regulated financial environments.

KEY ACHIEVEMENTS

- Designed and implemented the D0-D3 delegated-authority standard for autonomous insurance workflows, achieving zero unauthorized executions.
- Built and launched production AI agent workflows across Gemini, OpenAI, and Claude models, enabling creative and video use cases.
- Delivered a production MCP server and ChatGPT workflow app with secure OAuth and enhanced reliability controls.
- Built RAG pipelines using pgvector for semantic retrieval, embedding generation, and evaluation-aware runtime guardrails.
- First SRE in EMEA for HashiCorp Cloud Platform, improving operational readiness and observability for distributed systems.
- Delivered AWS EKS launch infrastructure for Sony PlayStation, supporting 400,000 concurrent users.
- Built identity and data services for ONS Census in a sensitive GDS-governed environment.
- Led AWS platform operations at MUFG Investor Services across five jurisdictions.
