

Tonderai Muchada

Senior Software Engineer

CORE SKILLS

- Java (8-21)
- C#
- .NET Core
- JavaScript
- TypeScript
- Python
- VB
- Spring Boot
- JPA
- Hibernate
- VB.NET
- Microservices
- Distributed Systems
- REST APIs
- Event-Driven Systems
- AWS
- Docker
- Kubernetes

CERTIFICATIONS

- Oracle Certified Professional (OCP): Java SE 8 Programmer II
- Oracle Certified Associate (OCA): Java SE 8 Programmer I

EDUCATION

- BSc Honours in Information Technology (Data Science) - Eduvos
- BSc Honours in Computer Science - National University of Science and Technology

PROFESSIONAL SUMMARY

Accomplished Senior Software Engineer with extensive experience designing and delivering high-scale, enterprise-grade backend systems in fintech, banking, and e-commerce domains. Specialises in Java (8-21), Spring Boot microservices, C#, .NET Core, and distributed architectures. Demonstrates a proven track record of building resilient, high-throughput systems handling tens of millions of transactions monthly. Skilled in performance optimisation, clean architecture, and engineering excellence, with a strong focus on mentoring, code quality, and scalable system design.

PROFESSIONAL EXPERIENCE

Senior Software Engineer

Liquid Intelligent Technologies

Jan 2024 - Present

- Designed and implemented high-availability payment processing systems in Java, supporting over 72 million monthly financial transactions.
- Built and optimised ISO 8583 integration layers for real-time transaction routing between banks, merchants, and payment processors.
- Improved system stability by 35% through performance tuning, monitoring enhancements, and repository optimisations.
- Led code reviews and mentored four junior engineers, elevating code quality and delivery consistency.
- Contributed to secure system design aligned with PCI-DSS compliance standards.
- Accelerated development cycles by approximately 30% using AI-assisted engineering tools and improved workflows.

Intermediate Software Engineer

Entelect

Dec 2021 - May 2023

- Designed and developed Spring Boot microservices for a banking platform serving over 400,000 SME customers.
- Built scalable bulk-processing systems for large CSV ingestion and transformation pipelines.
- Improved messaging reliability by optimising ActiveMQ configurations, reducing transaction failures.
- Implemented secure access control mechanisms for enterprise user management.
- Supported CI/CD pipelines and GitOps deployments using ArgoCD across multiple environments.
- Collaborated with cross-functional teams to deliver production-grade solutions in Agile environments.

Full Stack Engineer

Afrosoft Holdings

Jul 2019 - Nov 2021

- Co-designed and developed a payroll system supporting over 6,000 users, improving operational efficiency.
- Built RESTful APIs and integrated Angular frontends using MVC architecture.
- Developed an SMS-enabled disaster response platform for climate resilience initiatives.
- Delivered an agricultural e-commerce platform connecting more than 2,800 users, enabling digital trade.

Software Developer

Afrosoft Holdings

Jul 2017 - Aug 2018

- Developed and maintained enterprise applications aligned with evolving business requirements.
- Participated in system integrations, deployments, and production support activities.
- Collaborated with stakeholders to translate requirements into scalable technical solutions.

KEY ACHIEVEMENTS

- Built and optimised payment processing systems handling tens of millions of transactions monthly.
- Improved system stability by 35% through targeted performance tuning and monitoring strategies.
- Mentored junior developers, enhancing team delivery and code quality.
- Led code reviews and enforced clean code, testing, and engineering best practices.
- Contributed to architectural decisions for high-scale, distributed systems.
- Drove adoption of CI/CD and DevOps practices for faster, more reliable deployments.
- Accelerated development cycles by 30% using AI-assisted engineering tools.
